

ABSTRACT

Disclosed herein is a scent bottle type portable wireless terminal. The scent bottle type portable wireless terminal includes a body housing, a band shape rim unit surrounding upper and lower surfaces and a pair of side surfaces of the body housing, a
5 rotatable lens housing provided between the body housing and the rim unit, the lens housing extending in a longitudinal direction of the body housing, one or more openings defined between the body housing, the lens housing and the rim unit, and a rotatable handle coaxially extending relative to the lens housing so that it protrudes outwardly from an outer surface of the rim unit.
